

VERIFY™ ATZ

**PREEMERGENCE HERBICIDE FOR USE IN FIELD CORN,
SILAGE CORN, SWEET CORN, POP CORN, AND
PRODUCTION SEED CORN.**

Verify™ ATZ is recommended for control of yellow nutsedge and many annual grasses and broadleaf weeds listed in the “WEEDS CONTROLLED” section of the product label. This product alone will not control emerged seedlings.

Verify ATZ may be applied either as a surface application before or after planting, or after crop emergence. It may also be shallowly incorporated prior to planting to blend the herbicide treatment into the upper 1 to 2 inches of soil. Except for minimum or conservation tillage systems, the seedbed should be fine, firm and free of clods and trash.

PRODUCT FEATURES

- Labeled on more than 40 annual grass and broadleaf weeds and sedges, including yellow nutsedge, barnyardgrass, foxtails, lambsquarters, velvetleaf, and waterhemp.
- Offers a flexible rate range of acetochlor and atrazine, depending on soil type and texture.
- Flexible application window from preplant and preemergence through postemergence in corn up to 11” in height.
- May be tank mixed with other labeled herbicides to expand the spectrum of control.

See label for complete application guidelines and restrictions.

ACTIVE INGREDIENT

3.1 lbs/gal acetochlor +
2.5 lbs/gal atrazine

HRAC GROUP

15, 5

FORMULATION

Liquid

REI

12 hours

COMPARE TO

Harness® Xtra 5.6L

MODE OF ACTION

PS II inhibitor, long-chain
fatty acid inhibitor

SIGNAL WORD

Caution

RESTRICTED USE

Yes

PACKAGING

VERIFY™ ATZ

FREQUENTLY ASKED QUESTIONS

How should Verify™ ATZ be applied in corn for best results in conventional tillage systems?

Soil textural group	Broadcast rate per acre	
	Less than 3% organic matter (qt/A)	3% or more organic matter (qt/A)
Coarse	1.4	1.7
Medium	1.7-2.4	2.3-2.6
Fine	2.3-2.6	2.3-3.0

- For preplant incorporated and postemergence surface applications in conventional tillage systems, apply Verify ATZ before weeds reach the 2-leaf stage and the corn is no more than 11" in height.
- In areas of heavy weed infestations use up to 2.3 quarts of this product per acre on coarse- textured soils and 2.3 to 3.0 quarts of this product per acre on medium- and fine-textured soils. Do not exceed 2.5 quarts of Verify ATZ per acre on highly erodible soils with less than 30 percent plant residue cover.

How should Verify ATZ be applied in corn for best results in minimum/conservation tillage systems?

Soil textural group	Broadcast rate per acre (qt/A)
Coarse	1.7-2.3
Medium	2.3-3.0
Fine	2.3-3.0

- Single applications should be made less than 30 days before planting, but prior to weed emergence. On coarse-textured soils, applications should not be made more than two weeks prior to planting.
- Split applications should be made with 60% of the full-rate applied prior to weed emergence, no more than 45 days prior to planting. The remaining 40% should be applied at or immediately following planting, but before crop emergence.
- Use the higher application rate range in areas of heavy weed infestation.
- This product may also be tank mixed with 1 to 1.25 qt/A of simazine to provide improved control of fall panicum and crabgrass.
- If emerged weeds exist at planting, the application of a contact herbicide or tillage is recommended, when possible, to eliminate existing weeds.
- Do not exceed a total of 1.6 lbs/A of atrazine on highly erodible soils with less than 30% plant residue cover.
- Refer to the label for application instructions for Verify ATZ Lite following a Simazine brand herbicide.
