

HERBICIDE

CLETHODIM 2E

SELECTIVE POSTEMERGENCE HERBICIDE FOR CONTROL OF ANNUAL AND PERENNIAL GRASSES

Clethodim 2E is a selective postemergence herbicide for control of annual and perennial grasses. Clethodim 2E does not control sedges or broadleaf weeds. A reduction in vigor and growth is evident in treated grass weeds. Early chlorosis/necrosis of younger plant tissue is followed by a progressive collapse of the remaining foliage. Symptoms will generally be observed in 7- to 14-days depending on grass species treated and environmental conditions.

PRODUCT FEATURES

- Systemic herbicide which is translocated from the treated foliage to the growing points of the leaves, shoots, and roots.
- Provides excellent tank mix compatibility with a variety of herbicides for more complete weed control on labeled crops.

USE SITES

- Ornamentals
- Conifers
- Non-crop areas
