

FAIRVIEW SELECT®

Control of dollar spot on creeping bentgrass greens

Dr. Paul Koch, University of Wisconsin-Madison

Trial objective

To determine the efficacy of Fairview Select compared to Traction® for controlling dollar spot caused by the fungus *Clariireedia* spp. on a creeping bentgrass putting green.

Materials and methods

- Trial was initiated on May 23, 2019 and concluded on August 21, 2019.
- Each product underwent 4 replications. An untreated control plot was used for fungicide comparison. Testing plots were 3ft by 5ft.
- Fungicides were applied every 14 day for the duration of the study.

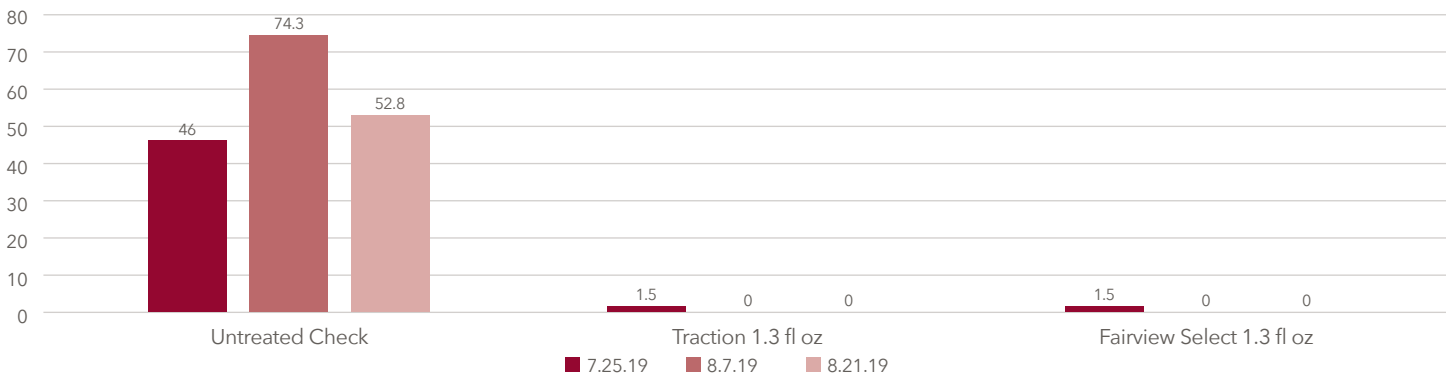

- Number of lesions were counted in the center of each plot.

- Turf quality ratings are based on a 1-9 scale: 9 = best quality, with 6 being commercially acceptable.

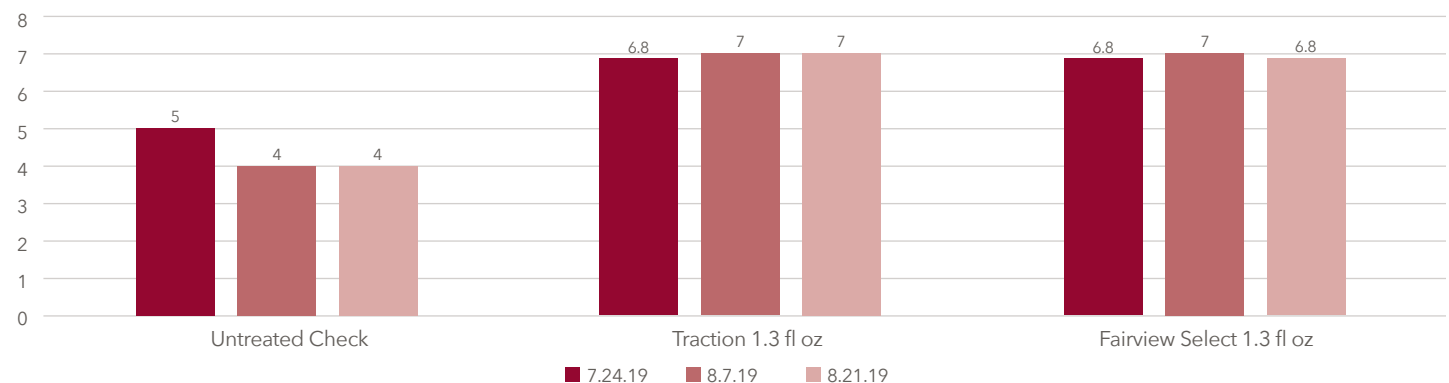

Trial results and conclusions

- Fairview Select (1.3 oz per 1000 ft²) provided control of Dollar Spot statistically equal to Traction. Both fungicides provided excellent season long disease suppression.
- Fairview Select (1.3 fl oz per 1000 ft²) had great turf quality rating, well above commercially acceptable levels.
