

HERBICIDE

RANGE STAR®

BROAD-SPECTRUM BROADLEAF WEED AND BRUSH CONTROL IN GRASS FORAGES.

Range Star® is a selective postemergence herbicide for control of a wide spectrum of annual, biennial, and perennial broadleaf weeds and brush in grass forages.

The most effective application rate and timing varies based on the target weed species. In mixed weed populations, the correct rate is determined by the weed species requiring the highest rate. Inadequate control may be observed if application is delayed since weeds may exceed the maximum size stated on the product label.

PRODUCT FEATURES

- Controls a broad range of tough broadleaf weeds including Kochia, ragweeds, pigweeds, thistles, field bindweed, dandelion, and others.
- Readily absorbed by plants through shoot and root uptake, translocates throughout the plant's system, and accumulates in areas of active growth.
- May be applied using aerial, broadcast, band, or spot spray applications, using water or sprayable fluid fertilizer as a carrier (as specified on the product label).

LABELED USES

- Conservation Reserve Program land
- Fallow systems (between crop applications)
- General farmstead
- Sorghum
- Grass (hay or silage)
- Pastures
- Rangeland
