

INSECTICIDE

IMIDACLOPRID 75WSP SELECT™

BROAD-SPECTRUM INSECTICIDE
FOR LONG-LASTING CONTROL.

Imidacloprid 75WSP Select™ systemic insecticide provides long-lasting control on a broad spectrum of insect pests in turf, landscape ornamentals, fruit and nut trees, and interior plantscapes. With both curative and preventive action, it provides quick knockdown and superior control of pests such as white grubs, crane flies, leafminers, mealybugs, and more.

PRODUCT FEATURES

- Proven performance – long-lasting insecticide.
- Broad-spectrum systemic action.
- Curative and preventive properties.
- Convenient water soluble pouches for easy tank mixing and measuring.

LABELED USES

- Golf courses
- Sod farms
- Commercial turf areas
- Residential turf
- Industrial turf areas
- Municipal turf areas
- Landscape ornamentals
- Interior plantscapes

See label for complete application guidelines and restrictions.

ACTIVE INGREDIENT

75.0 % imidacloprid

IRAC GROUP

4

FORMULATION

Water soluble powder

CHEMICAL FAMILY

Neonicotinoid

COMPARE TO

Merit®, Premise®

MODE OF ACTION

Binds to nicotinic acetylcholine receptors causing over stimulation and disruption of nerve transmissions.

RESTRICTED USE

No

SIGNAL WORD

Caution

PACKAGING

4 x (4 x 1.6 oz), 88 x 1.6 oz

EPA REG NUMBER

89442-11

IMIDACLOPRID 75WSP SELECT™

BROAD-SPECTRUM INSECTICIDE FOR LONG-LASTING CONTROL.

APPLICATION INFORMATION

Turfgrass

Imidacloprid 75WSP Select™ controls insect pests on turfgrass in residential lawns, business and office complexes, shopping complexes, multi-family residential complexes, golf courses, airports, cemeteries, parks, playgrounds, and athletic fields. The active ingredient in this product has enough residual activity so that applications can be made preceding the egg laying activity of the target pests. Best control is achieved when applications are made prior to egg hatch of the pests. Sufficient irrigation or rainfall is required to move the active ingredient through the hatch.

DO NOT apply when infested turfgrass areas are waterlogged or soil beneath turf is saturated with water. These conditions prevent thorough and consistent distribution. Best results are achieved when rainfall or irrigation after application will penetrate vertically in the soil column carrying the active ingredient into the zone where insects are normally located.

Restriction

DO NOT exceed a total of 8.6 ounces application (0.4 lb of active ingredient) per acre, per year.

Ornamentals

Imidacloprid 75WSP Select can be applied to ornamental plants in commercial and residential landscapes and interior plantscapes.

Imidacloprid 75WSP Select is a systemic insecticide that is transported within the plant system from the roots to upper foliage. Product must be applied into a growing area of the plant that allows absorption of the active ingredient. Adding soluble nitrogen type fertilizers to the spray solution when appropriate can promote the uptake of the active ingredient.

Application can be made by foliar or soil applications including soil injection, drenches, and broadcast sprays. Foliar applications offer locally systemic activity against insect pests. The systemic translocation of active ingredient will be slower when applied to woody plants with soil applications. This delay can take 60 days or longer depending on species and size of plant. To offset this delay, make soil applications before anticipated pest infestation.

Restriction

DO NOT exceed a maximum application rate of a total 8.6 ounces (0.4 lb of active ingredient) per acre, per year.

LABELED TURF PESTS

Billbug larvae	Hairy chinch bugs	Mole crickets	Southern masked chafers
European chafers	Japanese beetles	Northern masked chafers	White grubs, including black turfgrass atenius beetles
European crane flies	May and June beetles	Oriental beetles	

LABELED ORNAMENTAL PESTS

Adelgids	Emerald ash borers	Leafminers	Scale insects
Aphids	Japanese and other leaf-feeding beetles	Mealybugs	Thrips (suppression)
Asian longhorned beetles	Lace bugs	Pine tip moth larvae	Vine weevils
Borer	Leafhoppers	Royal palm bugs	Whiteflies
Elm leaf beetles		Sawfly larvae
