

ADJUVANT

# MSO SELECT™

ENHANCE YOUR HERBICIDE APPLICATION.

**MSO Select™** is a unique combination of highly refined methylated seed oil, selected emulsifiers, and surfactants. **MSO Select** is readily absorbed into the waxy cuticle of plants, allowing the active ingredient to reach its target more efficiently. When tank-mixed, **MSO Select** causes the solution to have an oily texture, allowing the product to remain in its liquid state longer after application.

## PRODUCT FEATURES

- Penetrates waxy cuticles.
- Effective during hot, dry conditions.
- Slows evaporation of actives.
- Works on grassy and broadleaf weeds.

## HOW IT WORKS

Moving the herbicide past the waxy cuticle on leaf surfaces and into the interior of the plant, is a significant barrier to achieving consistent postemergence weed control. If the actives cannot penetrate the leaf, they will simply remain on the surface until they evaporate or are washed off. The addition of **MSO Select** will improve the performance of spray applications by enhancing the penetration of active ingredients through the weather-hardened cuticle of targeted plant to the mode of action site. **MSO Select** also slows drying time which enables better uptake of the herbicide and more complete control.

## LABELED USES

Tank mixtures

## DIRECTIONS FOR USE

Follow the directions on all pesticide labels. Use **MSO Select** with any pesticide that requires or suggests the use of an MSO, ESO, MVO or other oil-based adjuvants. The first time the product is used, perform a compatibility (jar) and phytotoxicity test before application.

## APPLICATION RATES

**Herbicides, defoliants, desiccants** - 2 qt to 1 gal per 100 gal of spray mix.

**Insecticides, fungicides, miticides** - 8 oz to 5 qt per 100 gal of spray mix.

See label for complete application guidelines and restrictions.
