

PRIMERO[®]

**SELECTIVE POSTEMERGENCE HERBICIDE FOR
CONTROL OF LARGE, YIELD-ROBBING
GRASS SPECIES IN CORN.**

Primero[®] agricultural herbicide is a water dispersible granule used at 0.33-1.33 oz/A for selective postemergence grass weed control in field corn grown for seed or grain, popcorn and sweet corn.

Primero may be used on field corn, high lysine, waxy, white or other food-grade corn hybrids. It may be broadcast to corn up to 20" tall (freestanding) or that is exhibiting up to and including 6 leaf collars (V6), whichever is more restrictive. While Primero has a wide application window, research has shown best results are obtained when applications are made early postemergence when corn and weeds are small. Target applications to corn that is less than 12" tall for best overall performance.

PRODUCT FEATURES

- Effective against large, yield-robbing grass species.
- Offers tank mix flexibility with most postemergence broadleaf and grass corn herbicides.
- May be applied to field corn as a rescue treatment for late escaped grasses.

See label for complete application guidelines and restrictions.

ACTIVE INGREDIENT

75% nicosulfuron

HRAC GROUP

2

FORMULATION

Water-dispersible granule

FREQUENTLY ASKED QUESTIONS

Can I use Primero for late or rescue applications in corn?

- Yes. For corn 20-36" tall, apply Primero with drop nozzles only and avoid spraying into the whorl of corn stalks. Do not apply to corn that is taller than 36" or exhibits more than 10 collars (V10), whichever is most restrictive. Applications made to weeds larger than those listed on the label may vary from complete control to suppression. Level of control will depend on weed species, stage of growth and environmental conditions.
- *Refer to label page 5 for additional risks that may arise from late or rescue applications.*

Do I need to use an adjuvant with Primero?

- Yes. Applications of Primero must include either a crop oil concentrate or non-ionic surfactant. In addition, an ammonium nitrate fertilizer must be used unless specifically prohibited by tank mix partner labeling. COC plus ammonium nitrogen fertilizer is the preferred adjuvant system for activity on difficult-to-control species such as woolly cupgrass, quackgrass, sandbur and wirestem muhly.
- *Refer to label page 8 for adjuvant usage rates and composition.*

Can I tank mix Primero with other herbicides?

- Yes. Primero may be tank mixed with many herbicides registered for postemergence application in corn for additional control of broadleaf weeds. Compatible products include, but are not limited to, atrazine, dicamba, Mesotrione 4SC, Priority® MA, Distinct®, Exceed, and Northstar®.
- *Refer to label pages 10-17 for specific tank mix instructions and additional recommendations for specific weed problems.*

What rotational restrictions do I need to observe when using Primero?

- Rotational crops vary in response to low concentrations of Primero remaining in the soil. Primero dissipates rapidly in warm, acidic, microbiologically active soils. The amount of Primero that may be present in the soil depends on application rate, soil pH and organic matter content, elapsed time since application, crop production practices and environmental factors.
- *Refer to label pages 18-21 for rotational restrictions by crop, soil pH and application rate.*
