

PRIORITY® 8E

A SELECTIVE HERBICIDE FOR CONTROL OF MOST ANNUAL GRASSES AND CERTAIN BROADLEAF WEEDS IN A VARIETY OF CROPS.

Priority® 8E is a selective herbicide for use as a preplant surface-applied, preplant incorporated or preemergent treatment in water or fluid fertilizer for control of most annual grasses and certain broadleaf weeds in a variety of crops. It can also be applied as a postemergence treatment on corn, cotton, potato, soybean and tomato.

PRODUCT FEATURES

- Excellent choice as part of an integrated weed control program by providing broad-spectrum weed control in a variety of crops.
- May be used alone or in tank mixtures with other labeled herbicides.
- When mixed with other EPA registered herbicides, Priority 8E can increase the spectrum of weed control helping to minimize weed resistance.
- Priority 8E can be applied through ground, aerial or chemigation application equipment.

ACTIVE INGREDIENT

7.64 lbs/gal metolachlor

HRAC GROUP

15

FORMULATION

Liquid

REI

24 hrs

COMPARE TO

Dual II Magnum®

MODE OF ACTION

Long-chain fatty acid inhibitor

SIGNAL WORD

Caution

RESTRICTED USE

No

PACKAGING

2 x 2.5 gal, 265 gal, bulk

EPA REG NUMBER

42750-340 | AD010623

See label for complete application guidelines and restrictions.

PRIORITY 8E

FREQUENTLY ASKED QUESTIONS

Does Priority 8E contain a safener?

• Yes, Priority 8E utilizes a dichlormid safener, which is in the same dicholoroacetamide family as benoxacor, the safener found in the leading metolachlor herbicide.

When should I apply Priority 8E?

Corn - preplant surface-applied fall application

- Apply after September 30 in MN, ND, SD, WI, and north of Route 30 in IA
- Apply after October 15 north of Route 91 in NE and south of Route 30 in IA
- Apply after October 31 north of Route 136 in IL

Corn - spring application

 Can be applied alone or in combination with other labeled herbicides Preplant Surface-Applied, Preplant Incorporated, Preemergence or Postemergence (refer to label pages 10-15 for more information).

Soybeans - preplant surface-applied fall application

- Apply after September 30 in MN, ND, SD, WI, and North of Route 30 in IA
- Apply after October 15 North of Route 91 in NE and South of Route 30 in IA
- Apply after October 31 North of Route 136 in IL

Soybeans - preplant surface spring application

 Use on medium and fine soils with minimum-tillage or notillage systems in CO, CT, DE, IA, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, MT, ND, NE, NH, NY, OH, PA, RI, SD, TN, VA, VT, WI, WV, and WY. Apply two-thirds of the specified rate of PRIORITY 8E (1.67 pts./A on medium soils and 2 pts./A on fine soils) as a split treatment 30 to 45 days prior to planting and the remainder at planting. Applications made less than 30 days before planting may be as either a split or single treatment. Apply 1.33 pts./A on coarse soils not more than 2 weeks before planting

Soybean - postemergence (from emergence up through 5th trifoliate leaf stage)

• Apply 1.0 to 1.33 pints per acre to soybeans from emergence through the 5th trifoliate leaf stage.

Cotton - preplant incorporated (NM, OK, and TX only)

 Apply Priority 8E to the soil and incorporate into the top inch of soil immediately before planting, at planting, or after planting, but before crop or weeds emerge.

Cotton - preemergence

 Apply Priority 8E to the soil surface at planting or after planting, but before weeds or crop emerge.

Cotton - postemergence

- VA, NC, SC, GA, FL, and AL: Apply Priority 8E at 1 to 1.33 pts./A when cotton is 3 to 6 inches tall
- TN, AR, MS, MO, and LA: Apply Priority 8E at 0.75 to 1.33 pts./A when cotton is 3 to 12 inches tall.
- TX, OK, NM, AZ, CA, and Clay Soils in AR: Apply Priority 8E at 1 to 1.33 pts./A when cotton is 3 to 12 inches tall, but before August 1.

For additional applications, follow the crop specific label requirements identified on the label.
